

Focused Code Quality Report

Project name: Helium

Report generated: 13/09/2020 23:02:29

This file provides a focused overview of the files in the project with the lowest maintainability indices (MIs) and functions with the highest cyclomatic complexities (CCs) to assist with high-level code quality management. **Quantitative code metrics are an imperfect tool, and do not give an accurate picture of programmer skill or intent.**

Lowest Maintainability Index Files

A
61.42
./helium.py
